NEW IMPROVED SAFETY LOCK.

The construction of this Lock forms a complete prevention to cutting away the astragal or jamb of a door and pushing the bolt back with a penknife or other instrument. The catch enters an opening in the case of the Lock with a corrugated flange, which closes up the opening and prevents any instrument being inserted to push the latch bolt back. It also locks double doors together, or the jamb and door together, thus preventing the nosing or catch being pried apart, so as to liberate the latch bolt from the nosing or catch.

Patented February 14, 1888.

No. 211—Back. Plain Bevel Bolt.
